Ministry of Defense (MOD) of a south african country purchase Mobile Antenna Mast systems Type Ftm 25/6 from leading supplier of Mobile Antenna Masts, SMAG Mobile Antenna Masts GmbH (SMAG), Germany.

MOD of a south african country has placed orders for a number of Mobile Antenna Mast Systems, type FTM 25/6, in favour of the German based company SMAG Mobile Antenna Masts GmbH. Essential for the decision was, beside the specific know-how, also the absolute reliability of the mast systems. The ease of use was another crucial factor for MOD when they considered purchasing the solution from SMAG. It is the first time that SMAG entered into an agreement to deliver its popular systems to this region – and more are to follow. MOD has announced their intention to continue the successful collaboration. The tailor-made antenna masts with a height of up to 40 m do not require any type of guy wires, which is a unique feature worldwide. They have been manufactured in Salzgitter since 1974 and have quickly gained prominence around the world. The systems are installed in more than 50 countries, in operation at military forces for e.g. communication, data transmission, jamming, monitoring, boarder control, as well as at civil customers like telecom, mobile phone companies, radio and TV broadcasting companies.

Mr. Wolfgang Schnelle, Managing Director of SMAG Mobile Antenna Masts GmbH, said: *‘We stand for a strong brand that inspires trust, quality and highest reliability. Our goal is not only to assist and advise our customers to find the right system for their specific business or application, but also to be a dependable partner to our clients after the commissioning phase. I am convinced that our products can prove their value in this new market, even in the most critical areas of application. The entire team is looking forward to further projects.’*
